

# Schuld/Bushnell Bulk Pellet Storage Silos

*Provided by Biomass Commodities*

- Constructed of “Galvanized Plus”
- 1 to 145 ton storage capacities
- Available in 5-12’ diameters
- Painted, with a unique surface preparation process
- Galvanized interior/exterior prevents rusting
- Smooth walled
- Optional ladder and safety cage
- Ground controlled, spring away cap for boom auger deliveries
- Pneumatic fill option to accommodate pressure fill delivery trucks

## What is Galvanized Plus?

The Schuld / Bushnell GALVANIZED PLUS bin is galvanized steel which is thoroughly prepared for painting with a ten-stage power and brush wash process followed by a “Bondtite” application for paint adhesion. The thoroughly prepared galvanized steel is epoxy prime painted, then a white polyester finish paint is applied. Both applications are individually oven-cured at 450°. The advantage is a lasting appearance with extended life that resists rust years longer than ordinary galvanized bins. Not only that, the Galvanized Plus bin provides cooler storage and fresher feeds. Schuld / Bushnell GALVANIZED PLUS bins are assembled with stainless steel fasteners and feature a one-piece HP (42°) or LP 11°) roof and a one-piece 45° or 60° hopper without bolted seams.
